

## THE PIPELINE

Spring is right around the corner and our newsletter is designed to inform you, as our customer at Rain-Man, what we are here for and what we have to offer.

### SPRING TUNE-UP

We offer a Spring Tune-Up which consists of:

- Turn on your water to pressurize the system
- Clean around all heads, straighten/lower and raise any necessary heads and check adjustments of heads for proper coverage
- Program your controller for the most efficient setting (s) at time of service
- Check rain sensor
- Check backflow device for leaks and damage
- Finish by completing an overall check to make sure the system is working properly

**Also, please let us know about certain enhancements you may want to do or talk about to your sprinkler system ahead of time so we can schedule your appointment accordingly. And remember, if your yard is neatly manicured (grass cut) it just makes our service more efficient which means less time on your property to keep costs down.**

We are now accepting calls for Spring Tune-Ups. Call Diane at 216-292-5554 to set up this service. Or you can send an e-mail to [info@rainmaninc.net](mailto:info@rainmaninc.net) or [info@rainmaninc.com](mailto:info@rainmaninc.com).

### SUMMER SPRINKLING PROGRAM

Don't forget if you haven't signed up for the Summer Sprinkling Program designed to help with your sewer costs. You as the customer must call The City of Cleveland Water Dept at 216-881-8247. Deadline for applications is end of April. In effect each year from May 1<sup>st</sup> through September 30<sup>th</sup>

### REFERRAL PROGRAM

We will be offering a Gift Card to a local restaurant for anyone that uses our referral program for a New Sprinkler System or Lighting System.

### AFFORDABLE LANDSCAPE LIGHTING

We also offer outdoor home & landscape lighting which is used to highlight your home and landscape. Low voltage LED lights can be strategically installed to illuminate your home, trees, shrubs, flowerbeds and gardens. It's a fantastic way to distinguish your home while making it more inviting and secure. With timers they can be set for as little or as long as you would like. We are now offering a Light Maintenance Service to clean fixtures & lens for a brighter look, and replace bulbs if necessary.

### MONEY SAVINGS & NEW THINGS TO COME

Here are a few suggestions as to how to save money and conserve water to maintain your Sprinkler System.

- Run your system manually to only water when it is necessary. Most clocks its only a push of 1 button
- Delete unnecessary zones where you don't need to water certain areas
- Run less frequent cycles with longer run times
- Add Rain Sensor

- **IRRIGATION GOING GREEN: By converting some or your entire fix sprayed nozzles into MP Rotors. MP Rotor is a multi-stream rotor the size of a spray nozzle, which is transformed into a highly efficient, low precipitation rate. This makes it ideal for water conservation and can help reduce your water and sewer bills.**
- **Green Technology is taking Irrigation to the next level, which they are referring to as "Smart Control", which will include everything from controllers to moisture sensors to rain and freeze sensors. How will it work? Weather sensor gathers weather data and then sends it to the controller which will recalculate a new watering schedule daily.**
